Summary: Electrum had a good camp and saw important improvements for several players, most notably Rudel (to most physical CB in league), Haraldsson (to one of top few Halfbacks in league), Dopppeganger (to superior starting quality cover CB), Rustmonster (to one of best OLB's in league), Quangtri to starting DE, 2nd pick Lurkerabove to starting quality safety, Umberhulk to starting quality DT, and several other players from marginal to solid backup quality. Electrum definitely addressed all the weaknesses they had, especially on defense, with a more solid line and more beef in the secondary, and improvement at every position. They may be able to use a bit more size against the run but are better than they were. At OLB they have better depth now as well as a superior OLB, which they were missing before. The few player declines were to marginal or backup players who are not really needed given the massive improvements, or an unremarkable starter replaced by someone at least as good (F, OLB). their holes are easily filled in. Injuries mattered not at all, and Electrum is projected to start the season with no injured players. Electrum goes from being the surprisingly upset division favorite of Season XI to likely being a massive favorite for Season XII. Are they keeping pace with the enormously improved Jade team? The Season XII championship may tell us.
